Investment Objective

The Fund seeks total return.

Fund Attributes

- Tactical high-yield bond exposure.
- May tactically adjust interest-rate duration and credit quality in response to market conditions.
- May use leverage in certain conditions.
- May use inverse fixed-income exposure during perceived rising-rate periods.
- May include a limited allocation to U.S. government securities.

Reasons to Invest

- Integrates multiple bond signals to manage risk and return dynamically.
- Allocates primarily to high yield bonds based on composite weighting of the bond signals.
- Secondary positioning in government bonds and defensive positioning in money markets also available.
- A collateral portfolio is managed within the fund.

An investor should carefully consider the investment objectives, risks, charges, and expenses of the Quantified Funds before investing. This and other information can be found in the Funds' prospectus and summary prospectus, which can be obtained by calling 1-855-650-7453. The prospectus should be read carefully prior to investing in the Quantified Funds.

High portfolio turnover may result in higher transaction costs and higher taxes when Fund shares are held in a taxable (non-qualified) account. Such costs are not reflected in annual Fund operating expenses and may affect the Fund's performance.

There is no guarantee the Fund will achieve its investment objective. There is no guarantee that any investment strategy will generate a profit or prevent a loss.

An investment in the Fund entails risk, including loss of principal.

Risks specific to investing in the Quantified Tactical Fixed Income Fund include: Subadviser's Investment Strategy Risk, Active and Frequent Trading Risk, Aggressive Investment Techniques Risk, Counterparty Risk, Credit Risk, Derivatives Risk, Interest Rate Risk, Leverage Risk, Lower-Quality Debt Securities Risk, No History of Operations Risk, Non-Diversification Risk, Risks of Investing in Other Investment Companies (ETFs and mutual funds), and Shorting (Inverse) Risk.

Alpha measures the difference between an investment's expected returns based on its beta and its actual returns. A positive alpha indicates the investment has performed better than its beta would predict. A negative alpha indicates an investment has underperformed, given the investment's beta. Beta measures an investment's sensitivity to market movements. A beta greater than one indicates the investment is more volatile than the market. If beta is less than one, the investment is less risky than the market. Standard deviation measures the range of an investment's performance. The greater the standard deviation, the greater the investment's volatility. The Sharpe ratio indicates the reward per unit of risk by using standard deviation and excess return. The higher the Sharpe ratio, the better the investment's historical risk-adjusted performance.
